Three Samsung A1 cameras are displayed. The top camera is a large, white, dome-shaped unit with a black lens housing. The bottom-left camera is a smaller, silver, cube-shaped unit with a large, prominent lens. The bottom-right camera is another white, dome-shaped unit, similar to the top one but with a black base. All three cameras have the 'SAMSUNG' logo on their front. The cube-shaped camera also features 'A1' and 'HD' branding. The background is white with a faint 'RA' logo in the top left corner.

A1 Camera Terms & Features

Super High-Resolution

A1 camera technology eliminates false colour artifacts (Moire) by utilising a special optical low pass filter and is able to resolve a horizontal resolution of 600 TV lines, by means of 12 Bit A/D serial signal processing coupled with image element enhancement technology. Additionally, the implementation of a 3 line processing algorithm to prevent noise under low illumination applications, directional adaptive filtering and adjustment of aperture gain by luminance level combine to provide a more vivid and clearer image.

Virtual Progressive Scan (VPS)

A1 camera models featuring WDR functions generate images using Double Scan CCD technology and these cameras provide VPS (Virtual Progressive Scan) operation which can utilise either Interlace or Progressive scanning methods. This VPS is unique to Samsung and ensures the edges of moving objects are clearly defined. Applications for Samsung cameras utilising this technology include highway and ANPR projects. When used with LCD monitors offering progressive scan operation, Samsung VPS produces visibly superior images to non-VPS cameras. The problems of the blurred edges resulting from delays in even/odd field image scanning, are eliminated when VPS technology is used with a network product (encoder).

Motion Adaptive DNR

The A1 DNR (Digital Noise Reduction) function eliminates noise thus generating a distinct and clear image. A1 technology utilises both an adaptive 2D filter reducing noise in the brightness of the image and an adaptive 3D Filter reducing noise caused by movement. These filters are combined with DNLe technology which is applied to Samsung CCTV monitors. The result is that A1 camera series support Motion Adaptive DNR function that removes noise (Fixed Pattern, Random, etc.) and greatly reduces motion blur.

eXtended Dynamic Range (XDR)

Under strongly backlit or high contrast scenes, cameras generally produce images which reproduce detail in the brighter area of the scene.(fig1) Consequently, detail is often lost in the darker areas of the scene. Samsung A1 cameras provide XDR technology to increase the level of visible detail in the dark areas, whilst maintaining image clarity and detail in the brighter portions of the image. (fig2)

Intelligent Video Content Analysis

The Samsung A1 series of cameras, also provide built-in capability for video content analysis. Operational modes include:

- Fixed : Senses objects that appear and remain in a scene for longer than a pre-determined period of time.
- Moved : Detects objects removed from a scene
- Fence : Provides virtual electronic area [Area mode] and directional line [Line mode] and generates an alarm in the event of a breach of the area or a cross of the directional line.
- Tracking : Tracks an object through a scene and generates an alarm in the event of abnormal directional changes.

Camera Terms & Features

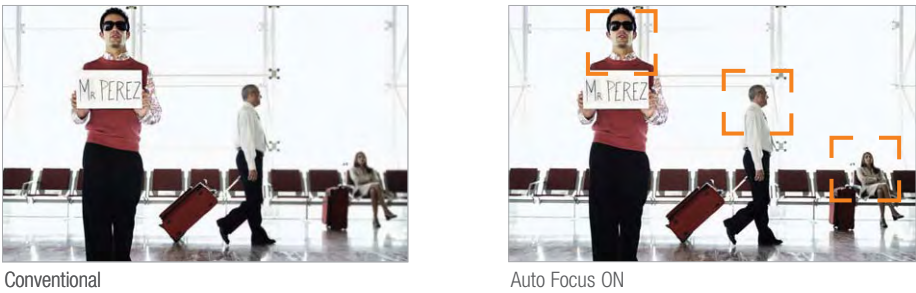

Camera Control Via Coaxial cable

The Samsung A1 series cameras offer CCVC (Camera Control Via Coaxial cable) via the video coaxial cable. This function provides access to the camera settings menu without connecting the any other control lines to the camera. This technology allows for camera set up (with the exception of lens focus) to be performed remotely, thus simplifying the installation process and offering remote adjustment in real time.

Full Auto Focus Function

Cameras that adopted full auto focus function provide clear images every time.

Auto white balance

Through the perfect Auto/Manual white balance function, these cameras ensure accurate representation of colors under any environment without producing a picture that is either more red or blue.

360° Endless, Lighting & Smooth Speed Vector Driving (Pan/Tilt moving simultaneously)

The camera supports 360° endless Pan and 180° Tilt functions at a very high speed (max 360°/sec). Due to the micro-stepping technology, one step angle is divided by 256. This allows high accuracy as well as ultra low noise levels (under 60dB). Micro-stepping technology also enables ultra low speeds down to 0.05°/sec for high zooming operations. Using vector drive technology, Pan/Tilt motion is done simultaneously.

DIS (Digital Image Stabilization)

This feature reduce the blurring effect that occurs when either the camera or the subject is in motion during image capture, providing a sharp images

ELC (Electronic Level Control)

Cameras with ELC function can use the manual iris lens economically by automatically operate the shutter speed. By adopting ELC, output level of cameras can be stable under any luminance level. This mechanism is designed to accommodate any C/CS lens mount adapter.

Camera Terms & Features

Privacy Zone

A "privacy zone" can be set if you desire to block viewing of specific areas in the picture.

Privacy zone OFF

Privacy zone ON

WDR (Wide Dynamic Range)

WDR, much more sophisticatedly improved Version of BLC, shows two files in one complex image, by utilizing high shutter speed in bright areas and low speed shutter in dark areas. When the camera detects an obvious difference in luminance, rather than showing the whole viewing area at one luminance level, it increases the range of the luminance so that there is no noticeable difference.

WDR OFF

WDR ON

Motion Detection

After a specific area has been selected for monitoring, if movement is detected in that area, the camera will trigger the alarm. When an external alarm device is attached to the camera, user should pay attention to the screen for the alarm triggering. This function is useful if user must monitor multiple screens at the same time.

Motion Detection OFF

Motion Detection ON

Day / Night

The Day & Night automatically switches to color mode during the day and to B/W mode during the night depending on the level of illumination which makes it ideally suitable for 24 hours-a-day surveillance. When in B/W mode the light sensitivity is enhanced.

Night

DNR (Digital Noise Reduction)

The digital noise reduction (DNR) removes the video noise that occurs in video signals, particularly when Automatic Gain Control is used in low light conditions. Since the Digital Noise Reduction is performed by using the cameras memory, when an object moves, the image can be blurred. However, the Digital Noise Reduction of the camera uses a special Samsung computer code to remove video noise and color noise, regardless of the motion of an object providing a clear image.

DNR OFF

DNR ON

Illumination

By controlling the speed of exposure entering into each picture area, an object can be detected in even low illumination. Samsung Camera utilize highly light sensitive CCDs and maximize performance through the use of Digital Signal Processor.

Camera Terms & Features

IP-66 (Cold Resistant, Water/Dust Resistant)

IP refers to Ingress Protection ratings specifying the environmental protection the enclosure provides. The IP-66 compliant rating provides the highest level of weather and vandal resistance. Usual operating temperature of IP-66 camera is -45°C~50°C.

Water Resistant

Cold Resistant

Anti Vandal

The cameras with the feature of Anti Vandal, are equipped with a special structure that protects against willful external shocks, water and dust.

Shock-resistant

Multi-Protocol

This camera adopts the multi protocol function and can be controlled by the other company's remote controller. The protocol type is set by the hardware (dip switch).

3-axis Dome Design

Samsung 3-axis dome camera can be easily installed in the restricted environment of a wall or inclined surface, while most existing surveillance cameras are difficult to install in these circumstances, thanks to the turning lens able to move freely 355° left/right and 90° up/down.

Time & Day Schedule

The camera feature a clock setting function with RTC (Real Time Clock). Using this function, you can monitor each area on a Time & Day schedule.

Lens Selection

When using an auto iris lens, The lens selection switch next to the camera should be set according to the type of auto iris lens. Select 'DC' if the installed lens is a DC-control type, and select 'VIDEO' if it is a video-control type. Adjust the illumination level with the DC-IRIS VR at the back of the camera when DC-type is selected, or adjust the Illumination level by using the level VR on the lens when video-type is selected.

* When using an AI lens, turn off the ELC switch at the back of the camera.

Pin no.	DC Control Type	VIDEO Control Type
1	Damp (-)	Power (+12V)
2	Damp (+)	N/A
3	Drive (-)	VIDEO Signal
4	Drive (+)	GROUND

When using a manual iris lens, Open the lens iris completely and turn on the ELC function at the back of the camera.

Camera Back Focus Adjustment

The back focus of the camera is set when the product is shipped from the factory. However, the back focus can be adjusted in the following manner if the focus is not properly set.

For Standard Lens (non-Zoom)

1. The lens should be able to clearly recognize high-definition images such as an object with cross stripes from a distance of 10 meters when the focus ring of the lens is set to infinity(∞).
2. Adjust the focus by turning the control ring of the flange back until the object can be seen clearly under the circumstances described above.
3. Fasten the screw of flange back control ring.

	Flange Back Focusing Distance
C Mount	17.526mm
CS Mount	12.5mm

For Zoom Lens

1. Place a high-definition image 3-5m apart from the camera and then turn the focus of the lens as far as possible in the TELE (zoom in) direction so that the image can be seen vividly as possible.
2. Turn the lens zoom as far as possible in the WIDE direction, turning the flange back control ring of the camera so that the object can be seen most vividly.
3. Adjust so that the focus from the TELE side can be vividly matched with the focus from the WIDE side by repeating above steps 1 and 2 2~3 times.
4. Fasten the screw of the flange back control ring. The control can be set more accurately if the focus can be adjusted by attaching dark color paper or ND filter to the front lens.

Rear Parts

Camera Manipulation Switch (setup switch)

The functions of these parts will differ, depending on the operation mode of the camera.

- When the camera is in general operation mode :
 - ⬆️ Up/Down Direction Switch : Zoom Tele or Zoom Wide switch, respectively.
 - ⬅️ Left/Right Direction Switch : Near Focus or Far Focus switch, respectively.
 - ⬜ [SET UP] Switch: This is used to enter the setup menu :
The user can enter the setup menu by pushing the [SET UP] switch, and holding it for 3 seconds.
- From the setup menu :
 - ⬆️ Up/Down Direction Switch : Used to move the cursor up or down.
 - ⬅️ Left/Right Direction Switch : Used to move the cursor to the left or right.
Other functions may be designated by the setup menu.
 - ⬜ [ENTER] Switch : Used to select the highlighted option.

ZOOM/FOCUS REMOTE Terminal

This is the terminal used to connect an external controller for ZOOM/FOCUS and menu control and for executing the HOME RETURN and AF functions. It can be set to one of four modes (A, B, C or D) according to the input condition.

Exterior

Day & Night External Signal Input and Alarm Signal Output Terminal

This is the terminal that allows connection to an external brightness sensor (optional) to trigger switching between black & white or color mode. It also sends out an alarm signal when linked to the MOTION DET function or black & white.

Video Output Terminal

This is the terminal that is connected to the video input terminal of a monitor. The video images from the camera are sent to the monitor through this terminal.

RS485 Port

This is the RS485 remote control port.

Power LED

The LED will be on if power is being supplied to the camera.

Power Input Terminal

This is the terminal that is connected to the power adaptor cable.

- 1/4" 410K/470K Pixels Super HAD CCD
- 12x optical zoom lens (10x digital zoom)
- Min. scene illumination : 0.005 Lux
- RS-485 remote control
- AC24V / DC12V
- Applicable Wall mount adaptor : SADT-101WM

Anti Vandal 3-Axis DayNight, WDR Dome Camera

SCC-C9302(F)

Features

- Convenient installation, with its 3-axis turning design (pan: 355°, tilt: 20°~ 90°)
- Water resistant and dustproof (IP66)
- 1/4" 410K/470K Pixels Ex-View CCD
- Horizontal resolution : 480 TV lines
- Min. scene illumination : 0.002(color)/0.0002(B/W) Lux
- 120x zoom lens (12x optical, 10x digital)
- 128x WDR (Wide Dynamic Range) • Day/Night
- Motion Detection (zones and sensitivity level set by user)
- Alarm input : 1Ch / Alarm output : 1Ch
- Privacy protection allows up to 8 privacy zones
- Remote control through RS485 and RS422(using SSC-1000/5000)
- Applicable Wall mount adaptor : SADT-102WM

22x Zoom SmartDome Camera

SCC-641/643A

Features

- Accurately captures distant object with the maximum 220x zoom.
- Possible to connect up to a maximum of 256 cameras using the exclusive controller (SSC-1000) made by Samsung, which can control a range of functions including pan, tilt, zoom, preset and manual focus
- Min. scene illumination : 0.005(color)/0.0005(B/W) Lux
- Day/Night (SCC-643A)
- Privacy zone (SCC-643A)
- Up to 128 preset points
- 360° horizontal and 180° vertical turning while searching, at a maximum speed of 240°/sec
- Motion detection
- Alarm Input: 4Ch, Alarm Output: 3Ch
- Horizontal resolution : 480 TV Lines
- Remote control through RS-485/RS-422
- Pan/tilt/zoom/focus can be controlled from a PC (separate software required)
- Applicable Wall mount adaptor : SADT-100WM

NET-i Viewer

NET-i is new IP SOLUTION of SAMSUNG which provides intelligent monitoring at Anytime from Anywhere.

Samsung proudly presents the solution, named **NET-i** that is a systematic, integrated and intelligent security & surveillance solution, provided with the best of breed technologies and Samsung's expertise in the industry. Highly balanced and well structured technology of security & surveillance products of Samsung consist of **NET-i** solution. The network based solution **NET-i** of Samsung & its related packages has positioned in innovative security solutions that bears the integrated and intelligent surveillance in real time basis at anywhere.

NET-i Viewer (Samsung Network Monitoring S/W)

- Monitoring Software for surveillance products of Samsung
 - : Supports DVR, NET-i ware and Network Cameras
- Up to 32 Channels simultaneous real time live monitoring in single PC (When using Dual monitors)
- Supports various video and audio format
 - : H.264, MPEG4, MJPEG, G.711, G.726, G.723, PCM
- Supports various video resolution
 - : Mega Pixel (1M, 2M, 3M), D1, 4CIF, Half D1, VGA, CIF
- Powerful E-Map based monitoring support
- Bi-Directional Audio communication
- Remote PTZ control and Power PTZ (Click and Go control)
- Supports various search and playback options
 - : Date and Time based search
 - : Event (Alarm, Motion, Intelligent Video) based search
 - : Normal Playback, Backward Playback, Fast/Slow Playback, Step Playback
- Notification in case of event occurring
 - : Highlighting in the border of video window
 - : Display event log message in real time
- Back up capability
 - : Manual Backup
 - : Format - REC1 (playback by NET-i viewer), SEC (self playback and watermark) AVI
 - : CD, DVD Backup
 - : External Storage (USB, NAS) Backup
- Manual Recording (up to 4 Channels) during 24 hours
- Multi-Level User access and authority management
- Multiple Language user interface support
 - : English, French, Germany, Spanish, Italian, Russian, Chinese, Japanese, Korean
- Automatic search of network cameras for quick and easy configuration
- Easy Device management (IP change, configuration, firmware upgrade)
- Automatic self upgrade (Connection to Samsung Upgrade Server)

NET-i Ware

NET-i Ware (Samsung Network Recording Server Software)

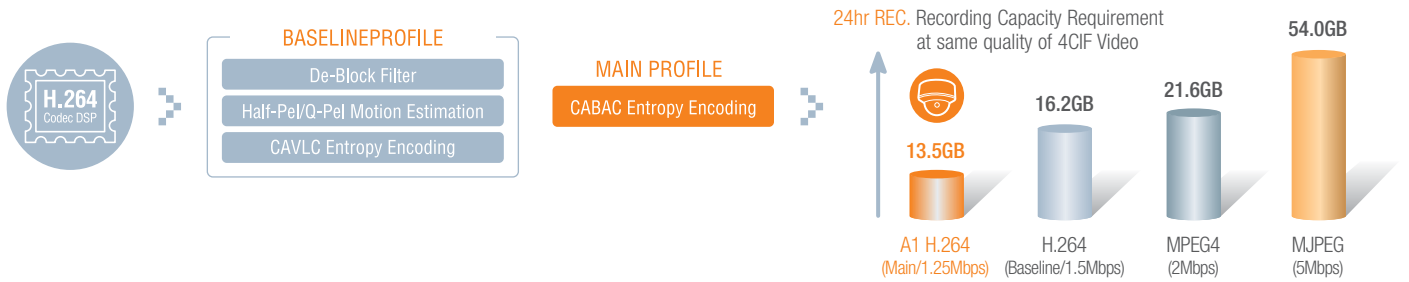

- Recording Software for Samsung Network Cameras
 - : Up to 32 Network Cameras recording (SNS-SF032)
 - : Up to 64 Network Cameras recording (SNS-SF064)
 - * Recording channel extension is available by channel addition kit.
 - * For the small scale installation, 4/8/16 cameras recording package will be available from Q1 2010.
 - * Live video monitoring and search/playback of recorded video by NET-i viewer software
- Supports various video and audio format recording : H.264, MPEG4, MJPEG, G.711
- Supports various video resolution recording : Mega Pixel (1.3M/2M/3M), D1, 4CIF, VGA, CIF
- Delivers high performance recording : Up to 480fps(NTSC) / 400fps(PAL) recording at D1 resolution
- Triplex operation performance : Recording, Live video transfer, Recorded video transfer
- Supports various recording options
 - : Continuous recording
 - : Event based recording (including Pre/Post alarm recording)
(Motion detection, I/V detection, Video loss, Alarm signal input)
 - : Scheduled recording (including Holiday setup)
- Notification in case of event occurring
 - : User defined alert sound output
 - : E-mail to pre-assigned receiver
 - : Notification to monitoring software (NET-i viewer)
- Event Log : System, User Access, Backup, Recording, Motion, Alarm, Video loss, I/V
- Back up capability
 - : Manual Backup, Schedule Backup support
 - : Format - REC1 (playback by NET-i viewer), SEC (self playback and watermark)
 - : CD, DVD Backup
 - : External Storage (USB, NAS) Backup
- Multiple disk allocation and distribution for stable recording
- Multi-Level User access and authority management
- IP filtering function for security access
- Multiple Language user interface support
 - : English, French, Germany, Spanish, Italian, Russian, Chinese, Japanese, Korean
- Automatic search of network cameras for quick and easy configuration
- Easy camera management (IP change, configuration, firmware upgrade)

H.264 Technology

High Performance H.264 Compression

Samsung A1 Network Camera is designed to work with high performance H.264 Main Profile compression technology, so it can provide high-quality video at a much lower bit rate than normal MPEG4 or MJPEG camera. As a result of using H.264 Main Profile technology, A1 network camera offers over 14% of enhanced compression efficiency than other Baseline H.264 camera.

CABAC Entropy coding Technology

Samsung A1 Network Camera has been adopted the H.264 CABAC Entropy Coding Technology, so the H.264 performance has been enhanced much better than normal H.264 compression method. With CABAC technology, Samsung network camera will provide a significant benefit to network transmitting with less bandwidth usage.

De-block Filter

The De-Block Filter technology allows Samsung A1 Network Camera to guarantee perfect image quality when it transmits low bit rate video through narrow bandwidth network. Because the De-Block Filter minimizes the block noise which is occurred when video is compressed highly to be sent through low speed bandwidth.

Multi-Codec & Multi-Usage

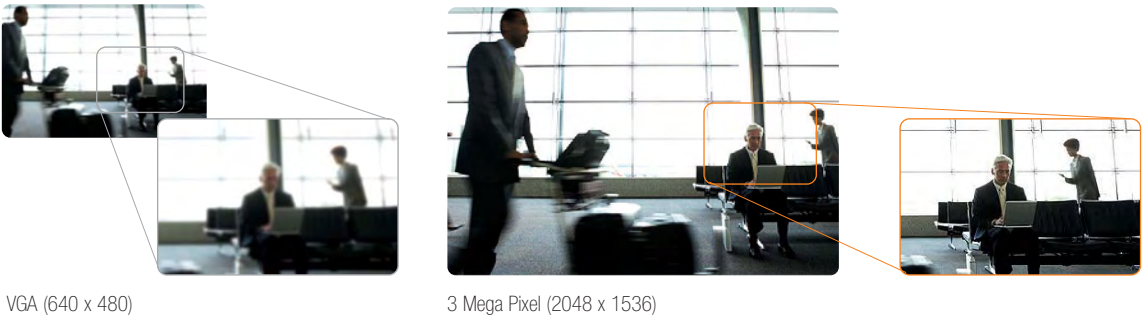

Dual Streaming including H.264 or MPEG4 and MJPEG can be transmitted simultaneously, enabling multiple purposes such as real time monitoring, high quality or high efficiency recording, mobile monitoring, E-mail notification, and SD memory save.

Network Terms & Features

3 Mega Pixel Network Camera (SNC-M300)

With 3 mega pixel resolution, SNC-M300 delivers sharp and vivid images for high-end surveillance and security monitoring.

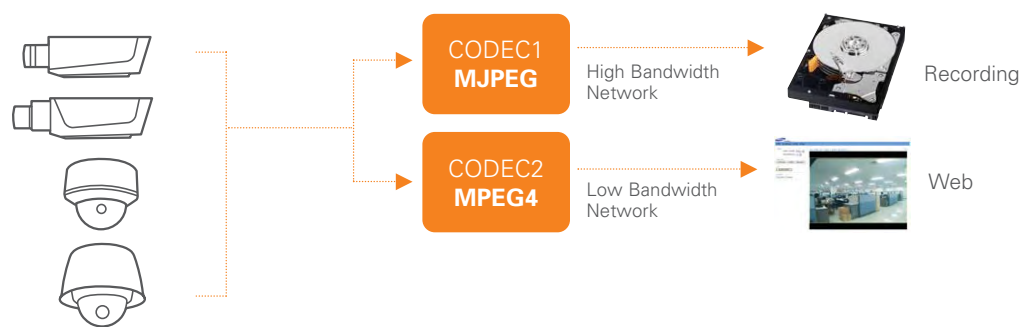

D1 High Resolution

Samsung network products with D1 high resolution provide clear, detailed, and amazingly bright images for surveillance and security monitoring.

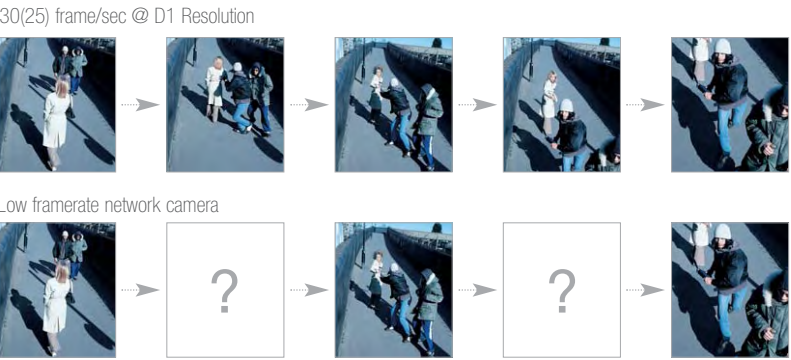

Dual Codec & Dual Streaming

Samsung network products with dual-encoding capability can generate and transfer both MJPEG and MPEG4 images simultaneously at 30fps (PAL 25fps) even though the image size is set to D1 resolution. This dual encoding and streaming capability is useful for transferring MPEG4 images over limited network bandwidth, while also storing high resolution MJPEG Images to the Nertwork Recording Software or NVR device.

Real Time Frame Rates at D1 Resolution

Samsung network products adopted the High Performance TI DaVinci DSP technology which provides real-time framerate (NTSC:30fps, PAL:25fps) at D1 resolution. This ensures the network cameras capture every event.

PoE (Power over Ethernet)

With built-in support for Power over Ethernet (PoE), the Samsung Network camera can be powered through the network cable, simplifying installation. Also, Samsung network cameras offer three power choices, AC24V, DC12V or PoE, with automatic detection making installation fast and efficient.

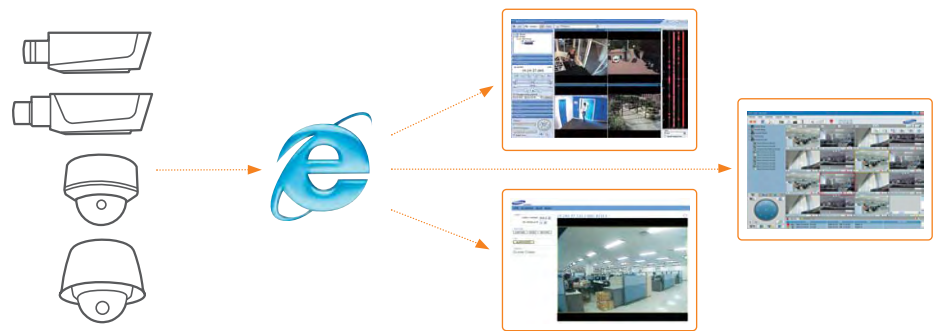

Pre/Post Alarm Image Buffering

When events occur, built-in buffering memory will store pre and post alarm images. These images can be transmitted to FTP server, sent via E-mail or recorded onto the SD memory card. Maximum buffering duration is total 60 seconds. (When buffering 1ips) Maximum buffering image numbers are 5 images per second. (* SNC-M300 : pre 3 sec, post 3 sec)

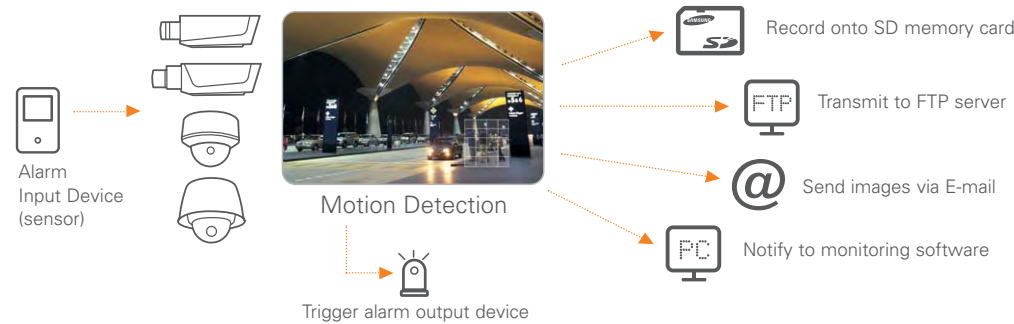

Network Terms & Features

Monitoring by Web Browser, *NET-I* CMS and other VMS solutions

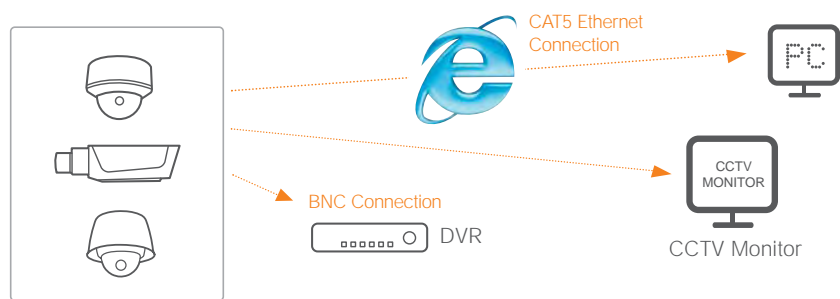

Alarm & Motion Detection

After a specific area has been selected for monitoring, if movement is detected in that area, the camera will trigger alarm outputs and Pre/Post images will be transmitted to FTP server, sent via E-mail or recorded onto the SD memory card.

Network / Analogue Hybrid (except SNC-M300)

Network cameras enable true hybrid camera operation. With both Ethernet and BNC connections, Samsung network cameras can simultaneously stream network video across a network and analogue video via coaxial cabling to support existing analogue equipment.

2-Way Audio Communication

With built-in microphone and speaker jack, the network camera can provide 2-way Audio Communication between viewer application and camera.

Remote Playback

NET-I software will provide various playback and search functions of the images stored on the SD card such as : Time and Date Search, Forward/Reverse Playback, Pause, Fast Forward/Rewind, and Frame by Frame Playback and Rewind. Also, the images from network cameras' SD memory can be monitored via the Web Viewer.

Built-in Web Server

With built in webserver, network camera and encoder offer remote network monitoring capability via Microsoft Internet Explorer. This feature is provided as the default option.

Dual Codec D1 Real-time Network Camera

SNC-B2315

Features

- Real-time 30/25 images per second at high resolution(D1)
- MPEG-4 & motion JPEG dual encoding and streaming simultaneously
- Video motion detection
- Pre/post alarm image buffering
- WDR (Wide Dynamic Range)
- Day/Night function (ICR)
- DDNS support
- Power over Ethernet (PoE) support
- Bi-directional audio support
- SD memory card slot for Alarm Recording

Real-time Framerate

SNC-B2315 adopted the High Performance TI DaVinci DSP technology which provides Real-time framerate (NTSC:30fps, PAL:25fps) at D1 resolution. This capability dosen't allow SNC-B2315 IP camera to miss important moments.

Dual Encoding / Streaming

With dual-encoding capability, SNC-B2315 can generate and transfer both MJPEG and MPEG4 images simultaneously at 30fps (PAL 25fps) even though the image size is set to D1 resolution (NTSC 720x480, PAL 720x576). This dual encoding and streaming capability is useful for transferring MPEG4 images over limited network bandwidth, while also storing high resolution MJPEG Images to the Nertwork Recording Software or NVR device.

SD Memory Slot

User can select important images to be recorded to the SD memory card such as: Alarm Events, Motion Detection or Time Scheduled Events. Using the WebViewer or Net-i software, you can remotely access the images from the SD card installed in the SNC-B2315.

* SNC-B2315 is compatible with SD and SDHC standard. * SNC-B2315 can support up to 16GB capacity of SDHC memory.

3 Mega-Pixel Network Camera

SNC-M300

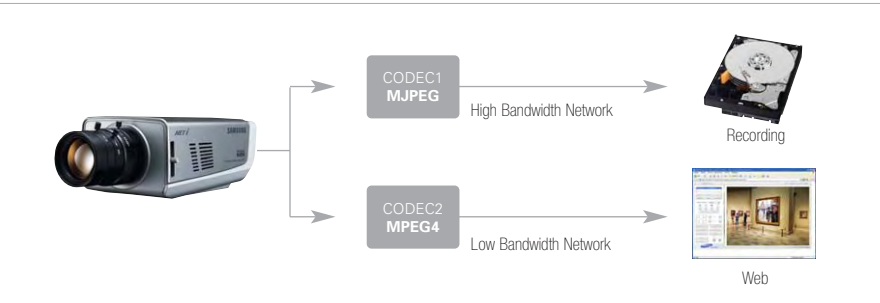

Features

- 3 mega pixel network camera
- MPEG-4 & motion JPEG dual encoding and streaming simultaneously
- 1.3 / 2 / 3 mega pixel resolution (selectable)
- Video motion detection
- Pre/post alarm image buffering
- DDNS support
- Power over Ethernet (PoE) support
- Bi-directional audio support
- SD memory card slot for Alarm Recording

Dual Encoding / Streaming

With dual-encoding capability, SNC-M300 can generate and transfer both MJPEG and MPEG4 images simultaneously. This dual encoding and streaming capability is useful for transferring MPEG4 images over limited network bandwidth, while also storing high resolution MJPEG Images to the Network Recording Software or NVR device.

* SNC-M300 supports only VGA(640x480) Resolution at MPEG4 mode.

Dimensions (unit:mm)

SD Memory Slot

User can select important images to be recorded to the SD memory card such as : Alarm Events, Motion Detection or Time Scheduled Events. Using the WebViewer or Net-i software, you can remotely access the images from the SD card installed in the SNC-M300.

* SNC-M300 is compatible with SD and SDHC standard.

* SNC-M300 can support up to 16GB capacity of SDHC memory.
